

MagicEndpoint Passwordless Authentication Next-Gen Solution

WinMagic offers powerfully simple and seamless authentication and encryption solutions that protect data and people without getting in the way of productivity and innovation.

Why WinMagic?

WinMagic is a leading developer of cybersecurity solutions that, over the course of 20 years, has raised the bar for endpoint encryption. As a result of our extensive experience with securing the endpoint – and our commitment to continuous innovation – we’ve launched an endpoint-focused passwordless authentication solution: MagicEndpoint.

At WinMagic, we’re dedicated to making the world more secure. We’re also focused on making that job easier and far more effective.

MagicEndpoint

Endpoint focused. Incredibly secure. Practically invisible.
This is MagicEndpoint passwordless authentication.

Revolutionizing next-generation authentication.

No User Action

Delivering Stronger, Easier Authentication

By eliminating user action, MagicEndpoint offers unsurpassable security combined with a superior user experience based on a zero-trust “always verify” principle.

Endpoint-focused

While so many security companies focus on securing servers and identifying users, we focus on the endpoint.

Simple, efficient, secure technology

Complex does not equal effective. Often, it’s just the opposite. If a security solution is too difficult to install, manage and use every day, it can’t do its job.

Phishing-resistant

Sending one-time codes to a phone is not as secure as once thought. By removing the phone, we create a smoother, more secure authentication process.

Go far beyond traditional MFA to meet cyber insurance requirements

MagicEndpoint meets today's cyber insurance requirements for MFA and future-proofs your organization against evolving cyber insurance requirements for phishing-resistant MFA.

Our passwordless MFA is phishing resistant and can be applied to:

- Pre-Boot login
- Windows login
- VDI login
- RDP login
- Email
- VPN access, and many other remotes services.

Our experts can show you how to get your organization ready for evolving insurance requirements.

See the Value for Yourself

Tested by Forrester and Gartner, our [ROI Calculator](#) proves that passwordless ROI is 10X in most environments.

Passwordless Offers 10X Value
