

SecureDoc Enterprise Server

Downloads & Documentation [Evaluation]

Product Version: 9.0 SR1

Published: July 7, 2022

Evaluation Agreement

The Licensed Materials contained in this document are available to install and test the product for a trial period of 30 days. By opening the sealed package containing the Licensed Materials, you acknowledge and agree that you have had the opportunity to read the [Evaluation Agreement](#), have understood it, and confirm that you will be bound by each of the terms and conditions of this Agreement.

How to install SES

PREP: Check that your server(s) meet the product requirements for this version. Click [HERE](#) to review.

1. Download and save the SES installation file locally to your device.
2. Download and review the product release notes and documentation. PLEASE ENSURE THAT YOUR SERVER(S) MEET THE PRODUCT REQUIREMENTS
3. Run the saved SES installation file and follow the installation wizard. SecureDoc will guide you through the process of installation. For more detail, please refer to the Quick Deployment Guide.
4. For instructions on how to retrieve your activation code, refer to the How to Activate your SecureDoc License Guide.

Important Notes

When using .MSI files for deployment

.MSI SecureDoc Client Installers must be downloaded separately; they are not embedded within the SES Installer. .MSI client installation files are typically used for scripted installations or software distribution tool-based installations. Please download them from the links provided in this document, and insert them into the SES Installer folder after installation or upgrade of SecureDoc Enterprise Server.

How to Use .MSI Installers: Download both .MSI files from the following links, then place both .MSI files in the SES Binary Installation files directory (normally this will be: C:\Program Files (x86)\WinMagic\SDDDB-NT\Binary Installation Files\WindowsPC).

When installing on Microsoft Surface devices

For installation on **Microsoft Surface Pro 1/2/3 or Surface Book**, you may use the standard SES Installer for these devices with support for on-screen keyboard and external devices at pre-boot.

For installation on **Microsoft Surface Pro 4, Surface Pro 2017 or Surface Book 2**, you must use the Surface Installer. This new installer supports on-screen keyboards and external devices at pre-boot (13" and 15" Screen Models).

How to Use Surface Installer: Download the Surface installer .EXE file (64-bit) from the following links, then place the downloaded Surface installer file in the SES Binary Installation files directory (normally this will be: C:\Program Files (x86)\WinMagic\SDDDB-NT\Binary Installation Files\WindowsPC).
